SUMMARY

Software Engineer with mobile-first foundations and full-stack reach. Currently Android-interning; ships a Flutter e-commerce app to Google Play and cross-platform apps with Kotlin Multiplatform. Focused on clean architecture and shipping end-to-end.

EDUCATION

Suez Canal University

Bachelor of Computers and Informatics | GPA: 3.4

Ismailia, Egypt

2022 – JUL 2026

Ismailia STEM School

High school offers high-level education | GPA: 3.8

Ismailia, Egypt

2019 – 2022

EXPERIENCE

Android Intern

Jul 2026 – Present

Pixalab AI | Remote

- Contributed Android UI features in **Jetpack Compose**, translating Figma designs into responsive, production-ready screens across the app's main user flows.
- Implemented MVVM business logic with **REST APIs** (Retrofit) and reactive state (**Flow**/Coroutines); collaborated in Agile using Git, code reviews, and unit tests.

Mobile Developer

Jan 2025 – Present

Freelance

- Besor3a Ecosystem (Flutter, Node.js)** | ▶ Play Store
- Architected a single Flutter app for Al-Salhia Al-Jadida with four roles (**Client/Seller/Driver/Admin**), role-based routing, and authentication against a shared **Node.js** REST backend.
- Built real-time logistics flows — live order tracking, driver dispatch, and push notifications — syncing order state across all four roles.
- Implemented product catalog browsing, seller media uploads, cart, and checkout flows with offline-tolerant caching for low-bandwidth networks.
- Managed production release on Google Play: app signing, store listing compliance, and staged rollout under security and privacy requirements.

PROJECTS

GitMatch | KMP (Kotlin Multiplatform), Java Spring Boot, PostgreSQL, Docker | 📱 GitHub

2026

- Architected a full-stack developer networking platform using **Kotlin Multiplatform (KMP)** for a shared business logic layer across Android and iOS clients.
- Developed a robust RESTful backend using **Java Spring Boot** and **Spring Security**, implementing JWT-based authentication and PostgreSQL for persistent data storage.
- Engineered a high-performance "Swiping Interface" using Compose Multiplatform, leveraging reactive programming (Flow/Coroutines) for smooth, non-blocking UI updates.

GeoQuest | Kotlin, Jetpack Compose, Hilt, OSMdroid SDK, Geofencing API | 📱 GitHub

2026

- Developed an interactive location-based treasure hunt application that utilizes the **Geofencing** API to trigger real-time, proximity-based events.
- Architected a scalable and modular codebase using Hilt for dependency injection and Clean Architecture principles.
- Built a dynamic, reactive UI with Jetpack Compose, integrating interactive maps to create a seamless gamified user experience.

Conan | Kotlin, Jetpack Compose, MVVM, WorkManager, DataStore | 📱 GitHub

2025

- Created digital wellness Android application for productivity enhancement through content monitoring and intelligent blocking using the **Accessibility** framework.
- Achieved **96%** detection accuracy with ContentBlockerAccessibilityService for real-time content analysis and intervention overlays.
- Implemented background monitoring with WorkManager and efficient data persistence using DataStore.

SKILLS

Programming Languages: Kotlin, Java, Python, Dart, SQL, JavaScript

Technologies: Jetpack Compose, XML, Android SDK, MVVM, MVI, Hilt, Coroutines, Flow, Room, Retrofit, Paging3, WorkManager, DataStore, Android Studio, Git/GitHub, Android Profiler, Gradle, Node.js

Additional Technologies: Java Spring, Flutter, Firebase, Kotlin Multiplatform (KMP), ONNX Runtime, JUnit, Espresso

Certifications & Programs: Digital Egypt Pioneers Initiative (DEPI), GreenHack Hackathon, Deloitte Innovation Hub (DIH) Mentorship

Languages: Arabic (Native), English (Professional Working Proficiency - B2+)
