SUMMARY

Software Engineer specializing in Mobile and Backend systems. Experienced in building cross-platform ecosystems using KMP, Spring Boot, and Flutter. From architecting AI-powered platforms to shipping production-ready e-commerce apps to the Google Play Store, I focus on building end-to-end solutions with a clean-code mindset.

EDUCATION

Suez Canal University

Bachelor of Computer Science | GPA: 3.3

Ismailia, Egypt

2022 – Expected 2026

Ismailia STEM School

High school offers high-level education | GPA: 3.8

Ismailia, Egypt

2019 – 2022

EXPERIENCE

Mobile Developer

Jan 2025 – Present

Freelance

- **Besor3a Ecosystem (Flutter, NodeJs)** | 📱 Play Store
- Engineered a multi-role e-commerce platform for Al-Salhia Al-Jadida, featuring dedicated interfaces for Clients, Sellers, and Drivers with integrated real-time logistics and order tracking.
- Managed the full production deployment on Google Play, ensuring compliance with security and data privacy standards.

PROJECTS & APPLICATIONS

GitMatch | KMP (Kotlin Multiplatform), Java Spring Boot, PostgreSQL, Docker | 🐙 GitHub

2026

- Architected a full-stack developer networking platform using **Kotlin Multiplatform (KMP)** for a shared business logic layer across Android and IOS clients.
- Developed a robust RESTful backend using **Java Spring Boot** and **Spring Security**, implementing JWT-based authentication and PostgreSQL for persistent data storage.
- Engineered a high-performance "Swiping Interface" using Compose Multiplatform, leveraging reactive programming (Flow/Coroutines) for smooth, non-blocking UI updates.

GeoQuest | Kotlin, Jetpack Compose, Hilt, OSMdroid SDK, Geofencing API | 🐙 GitHub

2026

- Developed an interactive location-based treasure hunt application that utilizes the **Geofencing** API to trigger real-time, proximity-based events.
- Architected a scalable and modular codebase using Hilt for dependency injection and Clean Architecture principles.
- Built a dynamic, reactive UI with Jetpack Compose, integrating interactive maps to create a seamless gamified user experience.

AI-powered Financial NER Library | Kotlin, ONNX Runtime | 🐙 GitHub

2025

- Built an AI-powered Named Entity Recognition library achieving **90.5%** accuracy in extracting financial entities from English and Arabic banking messages.
- Implemented hybrid **BERT** + rule-based architecture for real-time identification of amounts, banks, merchants, and currencies in multi-currency transactions.

Gymify | Kotlin, Jetpack Compose, Room, MVVM, OpenAI API | 🐙 GitHub

2025

- Developed a modern fitness application delivering personalized workout plans and intelligent exercise tracking with AI-powered recommendations.
- Architected clean **MVVM** implementation with repository pattern, reactive Flow state management, and efficient caching for seamless offline/online experience.

Conan | Kotlin, Jetpack Compose, MVVM, WorkManager, DataStore | 🐙 GitHub

2025

- Created digital wellness Android application for productivity enhancement through content monitoring and intelligent blocking using **Accessibility** framework.
- Achieved **96%** detection accuracy with ContentBlockerAccessibilityService for real-time content analysis and intervention overlays.
- Implemented background monitoring with WorkManager and efficient data persistence using DataStore.

SKILLS

Programming Languages: Kotlin, Java, Python, Dart, SQL, XML, JavaScript

Technologies: Jetpack Compose, Android SDK, MVVM, MVI, Hilt, Coroutines, Flow, Room, Retrofit, Paging3, WorkManager, DataStore, Android Studio, Git/GitHub, Android Profiler, Gradle, NodeJS

Additional Technologies: Flutter, Firebase, Kotlin Multiplatform (KMP), ONNX Runtime, JUnit, Espresso

Languages: Arabic (Native), English (Professional Working Proficiency - B2+)
